1. Adjust the ‘strain relief’ to the desired ‘drop height’ and tightening the side screw to secure its position. Remove any excess cord, leaving a minimum 6” / 20cm.

2. Mount the provided ‘T-bar’ to the junction box with the two provided #8-32 screws.
   - With the two provided mallets, connect the black with black and white with white electrical cords from the fixture to the main lines in the junction box. And connect the green ground wire to the T-bar ground screw.

3. Raise canopy and fixture over the ‘T-bar’ and align the 3 side holes before securing in place with the provided screws.
